

## Aluminum Chloride 6 Hydrate CAS 7784-13-6

Molecular formula:  $\text{AlCl}_3$

CAS:7784-13-6

Appearance:colorless crystal

Description:

Colorless crystalline or microstrip yellow crystal powder. Easy ChaoXie. In the wet air found to smoke. Soluble in water, ether, chloroform, carbon bisulfide and carbon tetrachloride etc organic solvents. Water solution, sent lot of hot, strong when can burn or explosion. Corrosive.

Use:

As an analytical reagent. Strong dehydrated agent. Petroleum cracking of catalysts. The metallurgical industry.

### Properties:

Calcium chloride anhydrous is white cubic crystalline or powder, having a strong hygroscopic, relative density 2.15, melting point.  $1935.5\text{ }^\circ\text{C}$   $775\text{ }^\circ\text{C}$  boiling point. Soluble in water and alcohol.

### Application:

Used for various substances desiccant, in addition to the road dustproof, soil improver and coolant. Used for chemical reagent, pharmaceutical raw materials, food additives and manufacturing metal calcium materials. Also used in dehydrated agent, the OARS agent, DTC

**Packing&Shipping:**

1. Packed in 25kg plastic bags/ fiber drums with inner plastic bags.
2. Delivery time: usually within 15 days after receiving payment.
